Why Airsight CO2 Meter?

The evolutions in sanitary conditions since 2020 have brought the importance of air quality to the attention of the general public. This new awareness emphasizes the relationship between CO2 and a healthy indoor climate and creates space for our market.

There is a vacuum in the market for products that

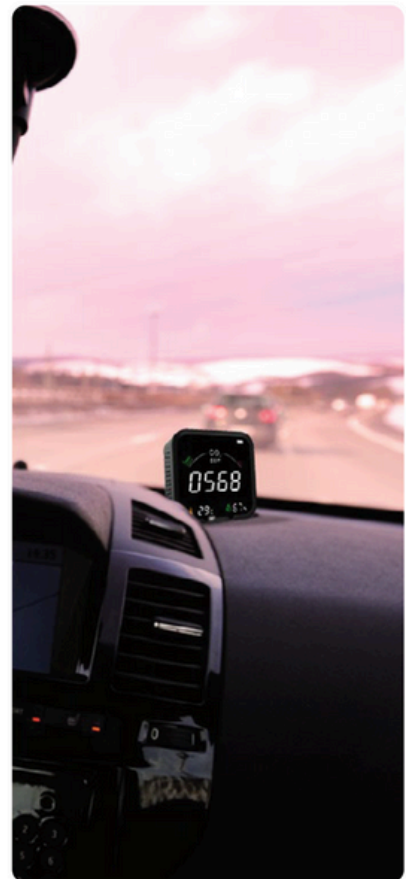

- Are qualitatively accurate, equipped with advanced measuring sensors.
- Are offered at an affordable price.
- Are accessible to the general public.

The market before

- **There is no suitable solution** for the general public who are aware of the importance of a healthy indoor climate.
- **Current models are often too expensive**, aimed at professional use or of poor quality.

Our product fills exactly that gap

- The model is technically and aesthetically progressive.
- The model is very suitable for both personal and professional use

Why Airsight CO2 Meter?

The Nomestic Airsight CO2 Meter is the best performing CO2 meter with a dominant market position in the Netherlands and Belgium.

Leading position in Netherlands and Belgium.

For all relevant search terms within the Netherlands and Belgium within the top 3 position, with a consistent top position for the highest ranking search terms 'CO2 meter' and 'Air quality meter'.

The Airsight CO2 Meter is one of the best selling CO2 meters on bol.com.

In absolute numbers, we achieved in a sales volume of 7000+ units and 1000+ units sold outside of bol.com.

Almost all potential customers visit our listing.

80% of all visitors looking for a CO2 meter visit our listing on bol.com and our webstore. Our model attracts as many as 250 visitors per day. In comparison, the average search volume for "CO2 meter" is 350 per day.

Wide range of users

Our model has a large presence at companies and schools. We are supplier of CO2 meters for large educational domains in Netherlands and Belgium, as well as other companies.

Product Specification

The compact Aightsight CO2 meter consists of the following features:

Advanced NDIR sensor

Our in-house developed high-sensitivity non-dispersive infrared technology detects CO2 concentration values between 400 and 5000 PPM. This makes the device extremely accurate, but also extra safe. Even the smallest increase in CO2 will alert you.

Complete air quality meter

Air quality is not only determined by based on CO2; things like humidity and temperature also count. This smart model combines everything in one.

Automatic calibration

The self-calibration algorithm automatically corrects deviations and allows the device to quickly adapt to a new environment.

In addition, automatic calibration promotes the durability of the device. Technological devices, like other products, need maintenance, but this often requires some technical knowledge. Not a techie yourself? Then chances are your devices will age faster. With self-calibration, however, a device is automatically maintained, allowing you to use it much longer.

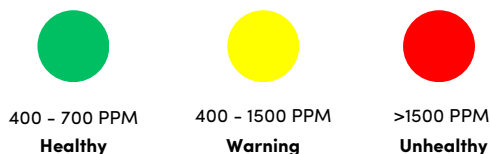

3-in-1

Our multi-functional CO2 meter detects more than just carbon dioxide concentration. In fact, air quality is not only determined by CO2; things like humidity and temperature also count.

This clever model combines everything in one and have a clear view of the complete indoor climate.

Active health notification

Intuitive design with a well-integrated color system with which the CO2 meter indicates the health level. This indication is based on a combination of all measured values together. So you don't have to read and interpret the measurement data separately, which makes using this device even easier.

Package Contents

- Aightsight CO2 Meter
- USB type-C cable
- User manual

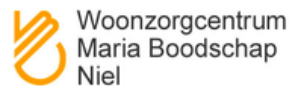

Technical specifications

- Rechargeable lithium battery
- USB type-C input
- CO2 accuracy: 50 PPM
- Temperature range: -10°C - +40°C
- Temperature accuracy : ±2°C
- Humidity range : 20% - 80%
- Humidity accuracy : ±5% RH
- Standby : up to 24h
- Dimensions : 90 x 98 x 40 mm
- Warranty: 2 years

Impression

Trusted by locals

About Us

Nomestic, a specialist in indoor air quality, has been working with professionals since 2021. Committed to an eco-design and local production approach, Nomestic works every day to give everyone the ability to control the air they breathe. The company works in a variety of business environments and meets the most demanding specifications.

A strong commitment to Healthy Air

Controlling environmental impact without compromising performance

Eco-design

Eco-design is one of Nomestic's first commitments because we want to limit the environmental impact of our solutions throughout their life cycle:

- Selected non-emissive, sustainable materials
- No glue or paint
- No planned obsolescence
- Repairability and recycling of components
- Low energy consumption
- Eco-responsible packaging

Innovation

With a genuine vision of innovation for health, Nomestic works every day to offer better air quality in order to prevent rather than cure. Our R&D teams are constantly listening to the needs of our customers and monitoring market evolution in order to offer high added value solutions. Our product ranges, equipped with on-board intelligence, offer users total transparency regarding the quality of the indoor air they breathe.

Dutch Design

To participate in society in a responsible manner, we offer sustainable products and services based on Dutch know-how. Accordingly, all components are designed in the Netherlands. Each device is individually checked and calibrated by technicians before shipping. This Dutch design reflects our know-how and our high standards: excellence must be the key word when it comes to health.
